This Supplement describes the procedure for using the Fiat Bravo Dualogic electronically controlled manual gearbox.

For the correct use of the gearbox, it is essential to read this Supplement in full to find out at the outset which operations are correct and permissible.

For additional information, consult the Owner Handbook to which this Supplement is attached.

The car is equipped with an electronically controlled manual gearbox known as “Dualogic” that has two operating modes: **MANUAL** and **AUTO**.

The gearbox consists of a conventional manual transmission to which an electronically-controlled electrohydraulic device that controls the clutch and gear shifts automatically has been added.

**READY TO START**

**MANUAL MODE**

**IMPORTANT** For the correct use of the system, only use your right foot to operate the pedals.

☐ Press the brake pedal
☐ Start the engine
☐ Push the gear lever A-fig. 1 towards (+) to engage first gear (if starting from **N** or **R** simply move the lever to the central position) or **R** to engage reverse.
☐ Release the brake pedal and press the accelerator pedal
☐ When driving, push the gear lever A towards (+) to engage a higher gear or towards (−) to engage a lower gear.

**AUTOMATIC MODE**

**IMPORTANT** For the correct use of the system, only use your right foot to operate the pedals.

☐ Press the brake pedal
☐ Start the engine
☐ Push the gear lever A-fig. 1 in **A/M** to engage the automatic mode or in **R** to engage reverse
☐ Release the brake pedal and press the accelerator pedal.
OPERATING MODE

The gearbox can work in two operating modes:

- the first is manual (MANUAL), where the driver decides directly when to shift gear;
- the second fully automatic (AUTO), where the system decides when to shift gear. ECO function (Economy) can be used with this mode reducing fuel consumption. To turn this function on, press button E-fig. 3 located on the gearbox trim.

The selection of the gear and the operating mode (MANUAL or AUTO) is made using the control lever A-fig. 1 in the centre console.

Avoid keeping your hand on the lever when you are not requesting a gear shift or an Auto/Manual mode change.

CONTROL LEVER

The control lever A, located in the dashboard, is the floating multistable type, i.e. it can take up three stable positions and three unstable positions.

The three stable positions correspond to neutral (N), reverse (R) and the middle position between the unstable positions (+) and (–).

The unstable positions, in other words those which are abandoned as soon as the lever is released, are the position requesting a higher gear (+), the position requesting a lower gear (–) and the position requesting the automatic operating mode (A/M).

The system returns to the manual mode by returning the lever to the A/M position.

With the car at a standstill and the key removed, the lever may be moved with/without the brake pedal pressed. The system does not carry out any action after the lever has been moved and remains in the gear memorized before the key was removed.

IMPORTANT After starting, if there is an error between the position of the lever and the gear actually engaged, this will be signalled, when the brake pedal is released, by a buzzer and by the letter N flashing in the display until the inconsistency no longer exists.
MANUAL OPERATION (MANUAL)

In this operating mode, the driver is responsible for choosing the best gear ratio to engage, depending on the car operating conditions.

Proceed as follows to shift gear:

- move the lever to (+) position to engage a higher gear;

or

- move the lever to (−) position to engage a lower gear.

If the gear change request may adversely affect the correct operation of the engine and the gearbox, the system does not allow the gear change but automatically changes down if the engine is idling (e.g. during deceleration).

In such cases the system warns the driver of the impossibility of changing gear by means of a buzzer.

STEERING WHEEL CONTROLS (where provided) fig. 4

On certain versions the change can be managed sequentially using (optional) controls on the steering wheel.

To use the controls on the steering wheel, the gear lever should be in the middle position between + and −:

- moving the lever on the steering wheel +: engagement of higher ratio;
- moving the lever on the steering wheel −: engagement of lower ratio.

The engagement of a lower (or higher) gear ratio is only permitted if the engine speed allows

AUTOMATIC OPERATION (AUTO)

To switch the automatic operation (AUTO) on/off, push lever A to the A/M position; activation will be signalled by the display of the word AUTO and the gear engaged fig. 5-6. In AUTO mode the system will change gear depending on the speed of the car, the engine speed and the intensity with which the accelerator pedal is pressed. A gear shift may be requested by operating the gear lever, but without necessarily switching this mode off: this function, known as ‘gear suggestion’, suspends the automatic mode for the time required to select the ratio requested by the driver.
Automatic operation
(AUTO - ECO)

The ECO can only be activated with the automatic mode engaged.

The ECO function is turned on by pressing button E-fig. 6 located on the trim next to the gear lever. After this function has been activated, the display will show the gear engaged and the words AUTO and E.

The ECO function activates the system selecting the most suitable gear depending on the speed of the car, the engine speed and the intensity with which the accelerator is pressed with fuel economy being the main objective.

INFORMATION ON DISPLAY

When the ignition key is turned to MAR, after around one second, display shows the gear engaged and the last mode used (AUTO or MANUAL):

N = neutral;
1 = first gear;
2 = second gear
3 = third gear;
4 = fourth gear;
5 = fifth gear;
6 = sixth gear;
R = reverse.

If the ECO function is used the display will show the letter E (Economy) next the gear engaged fig. 8-9.

IMPORTANT If the display does not show the gear engaged after 10 seconds with the ignition key in MAR, turn the ignition to STOP, wait for the display to turn off and then repeat the manoeuvre. If the problem persists, contact the Fiat Dealership.
ENGINE STARTING

The system permits engine start-up with a gear engaged and also with the gearbox in neutral (N); the brake pedal must always be pressed first.

It is advisable to place the gear lever in neutral (N) before starting the engine.

After start-up:
- the gearbox automatically engages neutral (N)
- the lever remains in the same position as the last time the engine was turned off
- the display will show the letter (N) and, when the brake pedal is released, a buzzer together with the flashing of the letter (N), will signal any inconsistency between the position of the lever and the gear engaged
- the gears that can be engaged are 1st, 2nd or reverse (R).

IMPORTANT If start-up is requested with the gearbox in a position other than N and without the brake pedal pressed, the display shows a dedicated message see (“Warning lights and messages” paragraph). In this case, repeat the start-up manoeuvre, pressing the brake pedal.

IMPORTANT If start-up is requested with the gearbox faulty, run the “Delayed start-up” procedure (see associated messages): turn the key to the AVV position for at least 7 seconds with the brake depressed and the engine will start. The system will be in recovery mode (highest gear permitted 3rd, automatic mode not available). If the engine does not start, contact the Fiat Dealership.

IMPORTANT When the driver’s door is opened, the system activates the hydraulic system so that it is prepared for the subsequent starting of the engine.
DRIVING OFF IN THE CAR

Driving off in the car, take-off, is permitted in 1st gear and 2nd gear (recommended on road surfaces with poor grip) and reverse (R).

To engage 1st gear
☐ press the brake pedal;
☐ with the lever in (N) or (R) move the lever to the middle position;
☐ with the lever already in the middle position, move the lever toward (+);
☐ release the brake pedal and press the accelerator pedal (pressing the pedal quickly so that it reaches the end of travel and turning off the ASR function, if present, allow a responsive take off).

It is possible to engage 1st or 2nd gear with the lever in the middle position and the brake pedal pressed using the lever (+) located behind the steering wheel (where present). For departures on a hill with a medium-steep gradient, it is advisable to use the handbrake.

To engage 2nd gear
☐ press the brake pedal;
☐ with the lever in (N) or (R) move the lever to the middle position and then toward (+)
☐ with the lever already in the middle position, move the lever twice toward (+)
☐ release the brake pedal and press the accelerator pedal.

To engage reverse (R)
☐ press the brake pedal (car completely stationary)

IMPORTANT If the car is moving, the request is accepted and carried out if the car speed is less than 3 km/h within 1.5 seconds of the request: if the request is not implemented, the system will maintain the gear engaged or if car speed drops below 10 km/h it will put the gearbox in neutral (N) and the manoeuvre must then be repeated.

☐ move the lever to (R)
☐ release the brake pedal and press the accelerator pedal.
BUZZER WARNING

For safety reasons, a buzzer warning sounds when the car is parked with the gearbox in neutral (N) (the warning sounds when the ignition key is turned to STOP);

With the car at a standstill, engine running and (1), (2) or (R) gear engaged, the system turns on the buzzer and automatically shifts the gearbox to neutral (N) when:

- the accelerator and/or brake pedals are not operated for at least 3 minutes;
- the brake pedal is pressed for longer than 10 minutes;
- the driver's door is opened and the accelerator and brake are not operated for at least 1.5 seconds;
- a fault has been detected in the gearbox.

PARKING THE CAR

To park safely, it is essential to engage 1st gear or reverse (R) gear with your foot on the brake pedal. If parking on a slope, operate the brake pedal. It is also essential to wait until the gear engaged disappears from the reconfigurable multifunction display before releasing the brake pedal.

IMPORTANT NEVER leave your car with the gearbox in neutral (N).

GENERAL WARNINGS

- With the car at a standstill and a gear engaged, keep the brake pedal pressed until you decide to set off. Then release the brake and accelerate gradually;
- when parked for long periods with the engine running, it is advisable to keep the gearbox in (N);
- in order to safeguard the efficiency of the clutch, do not use the accelerator to keep the car still (e.g.: stopped on a hill); if the clutch overheats it could damage it so use the brake pedal or the handbrake and only use the accelerator pedal when setting off;
- use second gear only when you need more control of take-off during manoeuvres on surfaces with poor grip;
- if, with reverse (R) engaged, you need to engage first speed or vice versa, only change gear when the car has come to a stop and the brake pedal is pressed;
- although very inadvisable, if the car is unexpectedly allowed to roll downhill with the gearbox in neutral (N) the system will automatically engage the gear best suited to car speed when a gear shift is requested to allow drive to be correctly transmitted to the wheels;
if necessary, with the engine off it is possible to engage 1st gear or reverse (R) with the ignition ON and the brake pressed. In this case, gear shifts must be made allowing at least 5 minutes to elapse between one gear shift and the next to safeguard the operation of the hydraulic system and the pump in particular;

• pressing the accelerator pedal quickly until it is in the end of travel position and switchin off the ASR function, if present, using the button in the dashboard allows for a responsive take off.

• during hill starts, accelerate gradually but fully immediately after releasing the handbrake or brake pedal to allow the engine to increase its rpm to a greater extent and overcome higher gradients with more torque.

### WARNING LIGHTS AND MESSAGES

#### DUALOGIC GEARBOX FAILURE (red)

When the ignition key is turned to MAR, the warning light turns on and should go off after a few seconds.

The warning light on the dial comes on flashing (together with a message in the display and a buzzer) to indicate that the gearbox is faulty.

If a fault is present, contact a Fiat Dealership as soon as possible to check the system.

#### REDUCE GEAR CHANGES

The message appears in the display to indicate that the driver is using the gearbox incorrectly.

Incorrect use (by the driver) could automatically activate a procedure for protecting the system.

Contact a Fiat Dealership if the message remains in the display.
MANUAL MODE
NOT AVAILABLE
The message appears in the display when it is not possible to select MANUAL mode with the engine running.

Contact a Fiat Dealership if the message remains in the display.

AUTOMATIC MODE
NOT AVAILABLE
The message appears in the display when it is not possible to select AUTO mode with the engine running.

Contact a Fiat Dealership if the message remains in the display.

CLUTCH OVERHEATING - SEE MANUAL
The message appears in the display together with a buzzer when the clutch overheats.
In this situation, limit take-off and gear shifts or if necessary park (turning off the engine) until conditions are optimum.

PRESS BRAKE PEDAL
The message is shown in the display together with a buzzer during an attempt at starting when the brake pedal is not pressed.

PRESS BRAKE PEDAL - DELAYED START-UP
The display shows these messages alternately and in sequence together with an warning buzzer when the system does not recognise the brake pedal to be operational during a starting attempt.
In this situation, keep the key on AVV for at least 7 seconds with the brake pressed: the engine will start. The system will be in recovery mode (maximum speed permitted: 31°).
GEAR NOT AVAILABLE

This message appears in the display together with a warning buzzer in the following cases:

☐ when it is not possible to change gear due to a fault in the system;

or

☐ when, due a fault in the system, it is only possible to engage 1st (1), 2nd (2), 3rd (3) or reverse (R).

PRESS BRAKE AND REPEAT MANOEUVRE

The message appears in the display accompanied, in some cases, by a warning buzzer for safety reasons if you attempt to change gear without previously pressing the brake pedal.

Contact a Fiat Dealership if the message remains in the display.

MANOEUVRE NOT PERMITTED

The message appears in the display together with a warning buzzer when the system will not accept a gear change via the control lever because certain conditions required for acceptance of the gear change are missing.

Contact a Fiat Dealership if the message remains in the display.

PLACE GEAR LEVER IN N (neutral)

This message appears in the display together with a warning buzzer when the system asks the driver to perform the manoeuvre.

When the gearbox is shifted to (N) the message in the display should go off.

Contact a Fiat Dealership if the message remains in the display.

IMPORTANT If start-up is requested with the gearbox faulty, run the “Delayed start-up” procedure (see associated messages): turn the key to the AVV position for at least 7 seconds with the brake depressed and the engine will start. The system will be in recovery mode (highest gear permitted 3rd, automatic mode not available). If the engine does not start, contact a Fiat Dealership.

IMPORTANT The messages are only displayed if the engine is started with a gear other than neutral (N) engaged.
**TOWING THE CAR**

Ensure the gearbox is in neutral \( (N) \) (by checking that the car moves when pushed) and tow in the same way as a normal car with a manual gearbox (see instructions in Owner Handbook).

If it is not possible to place the gearbox in neutral, do not tow the car and contact a **Fiat Dealership**.

---

**FUSE REPLACEMENT**

For the location of the fuses, see the illustrations in the “Fuse replacement” paragraph in the “In an emergency” section of the Owner’s Handbook.
